**COLLEGE OF CLINICAL
PSYCHOLOGISTS**

(WA Section)

**Psychopathology & psychotherapy:
The view from inside & outside the brain**

Dr John Manners & Dr Marjorie Collins

Dr. John Manners is a Clinical Psychologist with over 35 years experience working in the area of psychopathology and psychotherapy. He has worked within the prisons and the welfare systems, holding senior positions within the Department for Community Development. Since 1984, he has been in private practice, where he provides psychotherapy, supervision, and teaching.

Dr. Marjorie Collins is a Clinical Psychologist in private practice, and a Senior lecturer in Psychology at Murdoch University, where she teaches neuropsychology, case formulation, and the principles and process of intervention. Marjorie also provides clinical supervision in the postgraduate programme, and acts as a consultant in drug and alcohol rehabilitation agencies. For more than 20 years, she has conducted research into the relationship between neurobiology, cognition, and emotion, and has published many papers in this area.

The last decade of brain research has shed new light on the neurological processes involved in psychopathology and its treatment. These findings have important implications for professionals working with psychologically troubled people, and give insights into how we might work more effectively with people in generating change. Clinical Psychologists Dr John Manners and Dr Marjorie Collins will present a one-day specialist seminar on the neurological and psychological processes in some key aspects of adult psychopathology and psychotherapy.

The seminar will cover:

- The various forms of dissociation, and their important role in emotional survival
- The neurobiological underpinnings of dissociative processes
- How the past replays in the present for adults with anxiety and depression
- Brain processes involved in past experiences which unconsciously impact in adulthood
- How implicit and explicit processes are involved in memories of past experiences; and implications for psychological intervention
- The key psychotherapeutic processes in core change
- Applying an understanding of the neurobiology of learning to improving clinical interventions
